EFFORTLESS INSIGHTS & OPTIMAL PERFORMANCE

Daikin factory expertise at your fingertips

Managing and monitoring HVAC equipment in small or mid-size buildings can often feel like a big headache. **But now, you change that for good with simple automation system applications using Daikin equipment.**

Whether you're overseeing multiple facilities or a single property, you can enjoy the power of cloud-based monitoring. Access the tools you need to gain insights into your building performance, while optimizing equipment performance and reducing maintenance costs across your portfolio, automatically.

- Easily control and manage small to mid-size buildings
- Greatly reduce upfront and long-term labor costs with a pre-engineered solution
- ★ **Proven, field-tested solution with remote service and maintenance, plus Daikin's factory expertise and support**

PRE-PROGRAMMED BAS

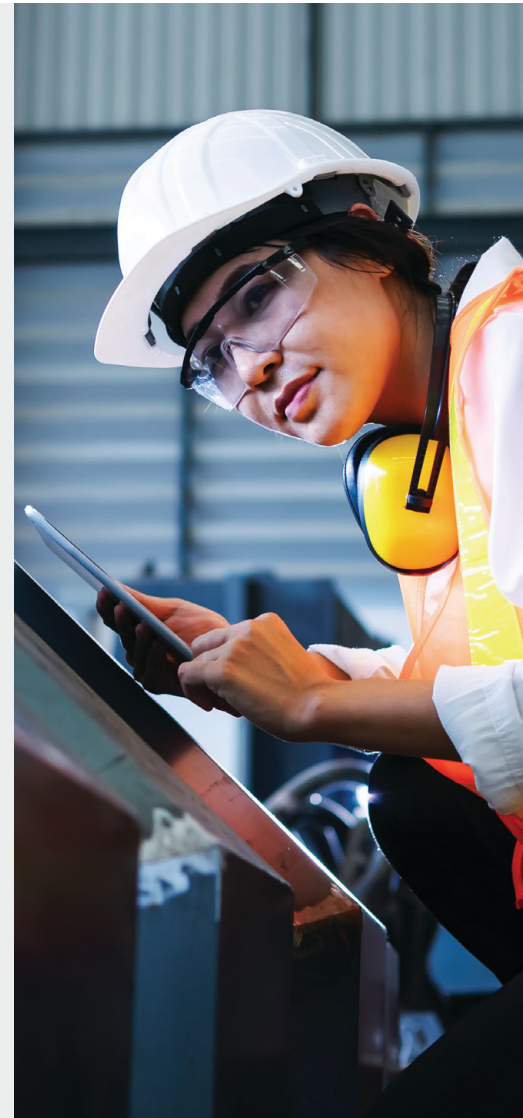

Gain flexible control with always-on support and remote monitoring

If you want HVAC automation that feels customized to your unique needs without the costly price tag, SiteLine has a solution ideally suited for you.

This out-of-the-box system works for many applications and is intended to take the complexity out of operations management.

With SiteLine's real-time remote access and monitoring, you can see changes as they occur and securely access and fine-tune your equipment from any device. You can also assign access permissions, custom alarms and alerts via email or text, so you have the confidence of knowing your building is performing at its best.

- Increase energy efficiency and prevent downtime
- Save money on maintenance and reduce repair costs
- Optimize Indoor Air Quality (IAQ)
- Stay ahead of the game with automatic system enhancements and upgrades at no extra charge
- Keep tenants cool, comfortable and happy

BEST APPLICATION

This is value engineering at its best. Pre-engineered to work with Daikin equipment without the high costs of a complex, custom system design.

PRE-PROGRAMMED BAS

Save on unplanned maintenance costs with actionable data

WORKS OUT OF THE BOX WITH ANY DAIKIN EQUIPMENT THAT IS BACNET® MS/TP COMPATIBLE

- ▶ Partner with a single-source manufacturer who builds the equipment, unit controller and BAS, and can engineer it together for optimal building performance
- ▶ Save time, money and energy in the simplicity of a solution that is pre-engineered to work for your system and for the everyday user
- ▶ Get expertise directly from the factory on Daikin Applied equipment — RTUs, air terminal units, water source heat pumps (WSHPs), fan coil units and chillers

AUTOMATICALLY BRINGS IN AND OPTIMIZES DATA FROM THE CLOUD

- ▶ Choose to connect with cellular or building LAN, knowing that both are best-in-class security — the cell connection allows for remote commissioning during installation, getting you up and running from day one
- ▶ Keeps your HVAC on its own network
- ▶ Ability to do custom sequencing of equipment that's easily implemented and tailored to your building and your customers' needs from day one, giving you greater comfort control
- ▶ Optimized alarms and alerts, plus fault detection for faster troubleshooting
