EFFORTLESS INSIGHTS & OPTIMAL PERFORMANCE

Embrace the power of the cloud

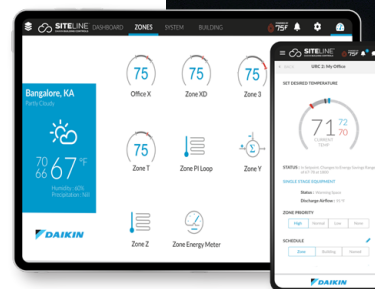

What if monitoring and managing your building's HVAC equipment was as easy as using your smart phone?

Whether you're overseeing multiple facilities or a single property, with SiteLine wireless building controls you can enjoy the power of cloud-based machine learning algorithms and predictive models more sophisticated than on-premises systems. Access the insights and tools you need to monitor energy consumption while optimizing equipment performance and reducing maintenance costs across your portfolio, automatically.

- Integrate both Daikin and non-Daikin equipment
- Simple and affordable out-of-the-box setup with built-in analysis
- ★ **Proven, field-tested solution with real-time remote maintenance, plus Daikin's factory expertise and support**

WIRELESS BAS

Finally, an HVAC automation system everyone feels comfortable with

SiteLine helps you monitor building performance and identify problems before they occur. Machine learning algorithms in the cloud generate thousands of decisions and micro adjustments to continuously optimize and control your building portfolio.

With SiteLine's real-time, remote access and monitoring, you can see these changes as they occur, or securely access and fine-tune your building from any device. You can also assign access permissions, custom alarms and alerts via email or text, so you have the confidence of knowing your building is performing at its best.

- Increase energy efficiency and prevent downtime
- Save money on maintenance and reduce repair costs
- Optimize Indoor Air Quality (IAQ) and sustainable environments
- Keep tenants cool, comfortable and happy
- Monitor and measure against energy or carbon goals

POWERED BY 75F

Wireless building controls for integrating equipment across light commercial, applied and VRV units into one easy-to-manage experience for both retrofit and new construction.

WIRELESS BAS

Flexible, affordable and ready to roll

Get a building automation system that enables better control of your building's HVAC, lighting and indoor air quality—right out of the box. SiteLine wireless building controls are field proven across over 1,000 successful installs in buildings over a million square feet and come with the expert support from Daikin you expect. Every step of the way.

EASY TO INSTALL AND INTEGRATE WITHOUT UPGRADING EQUIPMENT

- ▶ Integrates and controls with both Daikin airside and waterside equipment as well as other light commercial and applied brands
- ▶ Easy retrofit, direct replacement VRV solution incorporating indoor and outdoor air quality and ventilation control without additional power supply required
- ▶ Scalable wireless VAV solution powered by industry-leading algorithms that installs and continuously commissions without programming or networking
- ▶ Vertically integrated suite of sensors, equipment controllers and cloud-based software delivering predictive, proactive building automation across a wide variety of systems

MORE CONNECTED VIEW FOR A COMPLETE PICTURE

- ▶ Combines multiple siloed unit controls into one seamless system to offer a better picture of overall energy, savings opportunities and indoor air quality (IAQ)
- ▶ Operates outside the building network to eliminate network challenges and via standalone local control if building systems go down
- ▶ User-friendly tools and dashboards to monitor energy consumption, performance, and system trends
- ▶ Optimized alarms and alerts, plus fault detection, for faster, data-driven micro-adjustments or troubleshooting

**UP TO
50% SAVINGS**
