Release Version 1.3

Release Date: 12/08/2025

1. User Management Enhancement

- Add support to allow multiple roles assignment to a single user.
- Allow revocation of one or more roles from a user.
- Added rule to include “Comm_Tool_” as prefix to all role names.

2. Improvement in Orchestration process

- Backend enhancement – Save serial number during orchestration process.
- UI – Displays a message to when orchestration is completed successfully.
- Logs – Updated to reflect the new changes/data in the logs.

3. UI Improvements

- Enabled footer links.
- Add Support contact information.
- Modified the header icons and links.
- Update pop-ups to be consistent across the application.
- Updated the UI for Re-Discovery feature by adding icons and tooltips.
- Added deletion notification when deleting instance from gateway.

Release Version 1.2

Release Date: 09/04/2025

1. Role Based Access Management

Introduced RBAC (Role Based Access Control) framework to enhance system security and streamline user management.

- Users are now assigned roles (e.g., Admin, Editor, Viewer) that define their access privileges.
- Access to modules/screens and operations is governed by role permissions, ensuring compliance and least privileged access.

2. User Management

- Administrators can now search for a user and view their role and access levels.
- Admins can now add new users and can assign appropriate role directly through the user management interface.

3. Orchestration Logs

- Added orchestration logs that capture and display each orchestration and deletion run as a complete, end-to-end transaction. Users with the right access/role can now view orchestration details directly within the interface.

4. Orchestration Profile Version Management

- The tool now supports a new profile (v2) structure which includes separate *Answers* and *Prompts* sections. This change improves orchestration accuracy and compatibility by performing bit-to-bit comparison in the backend.

5. UI Improvements

- Added release version to the UI
- Added indication that search was in progress when searching for device ID.
- Added a note showing the Device ID has been modified.

Release Version 1.1

Release Date: 03/17/2025

1. IOT platform Support

- Allow empty folders and directories
- Auto uploading specs and profiles to storage
- Stopped maintaining a message broker
- Added support for new config point

2. Updated UI

Release Version 1.0

Release Date: 02/06/2025
